

Data Manager for the Office of Kentucky Nature Preserves

The Office of Kentucky Nature Preserves anticipates the opening of a position for an information systems manager and GIS specialist. This position will be responsible for management of natural heritage program data, manage fairly complex relational databases, provide GIS support, and would also coordinate requests for environmental reviews and natural heritage data, including operations of the Kentucky Biological Assessment Tool (kynaturepreserves.org) .

A candidate with previous experience working with natural heritage program data, including Biotics, would be preferred. If interested contact Martina Hines at martina.hines@ky.gov. This position will eventually be posted on the [Kentucky Personnel Cabinet website](#), by a search for “Nature Preserves”, as well as announcements on the NatureServe website. We hope that the position will be officially posted in the early months of 2019.
